

Industrial Bearings, Valves & Compressors

With a vast experience in the manufacturing of industrial bearings, valve bodies and compressor cases, our components are produced to the highest standard and are used in a variety of onshore and offshore applications. Whether on board an ocean going vessel, lying deep beneath the ocean surface, or pumping gas across vast distances, our components have proved highly reliable. Produced to tight tolerances with consistent repeatability on casting dimensions, we supply either castings or finished components around the world.

We supply a wide range of high pressure water valves, with diameters ranging between 200 and 800mm, designed specifically for the fire safety industry. These valves are manufactured to the highest quality and integrity, and are supplied to customers across the globe.

We also supply a range of castings into the vacuum pump market, whether for vacuum packaging, furnaces, coating or industrial cleaning, pneumatic conveying or steam compression.
