

# Product Scope & Key Information

Batley Foundry was established in 1912 as a true jobbing foundry at its existing location. It has maintained its position as a quality supplier of iron castings in all conventional materials, such as Grey Iron, Hematite, and all SG Iron grades including Austempered Ductile Iron (ADI), alongside the more exotic materials such as Ni Hard, Ni Resist and High Chrome Irons.

Using our 2 coreless induction furnaces, we produce castings in the weight range of 3 kg to 2500kg.

Each of our 3 moulding lines has a 10 Tonne per hour sand mixer and all follow a flow line process. They produce both boxed and boxless moulds in Alkaline Phenolic chemically bonded sand. We believe this process provides a superior surface finish to the casting, with the added benefit of being more environmentally friendly.

We offer a single source of supply and have extensive partnerships with both traditional and high precision machine shops, pattern making facilities, painting and powder coating, heat treatment and module assembly companies.

We supply and deliver worldwide exporting throughout Europe and the USA.
