

Transportation & General Engineering

As countries continue to look for other forms of transport, the requirement for castings for trains and trams continues to grow. We supply a range of castings into this market, along with components for a new prototype unmanned transport vehicle for airports.

We also produce general engineering components for use across various market sectors including gear cases, vacuum pumps, hydraulic and mechanical drives, water pumps, pistons, flywheels, pulleys, ships and helicopters.

We are proud of our achievements and our ability to deliver the exacting standards of our customers.
