

Power, Oil & Gas Industries

Batley Foundry has gained vast expertise in the production of castings for both Power Generation, Oil and Gas industries. Many components are critical to the operation in producing power, whether from traditional hydro-electric or nuclear power stations, or green renewable sources such as wind turbines.

We supply various complex castings for reciprocal compressors and steam or gas turbine components for use in the oil and gas market sectors. Many of our compressor castings are used in the harshest conditions, on either offshore platforms, ocean going vessels or rain forests, where oil or gas needs to be transported across land or sea.

Customers from around the world recognise our expertise in this area and as a trusted partner we can be relied upon to deliver to their requirements and to exacting standards.
